Supply Chain Automation Project

Objective:

The main objective of the organization is to merge departmental datasets and centralized them making it easier for anyone to understand what is happening in different Sheets or at different tables. Need to develop an admin dashboard to analyze different graphical representations of data for easier understanding. Program should provide interactive graphs and allow users to download or view custom column data's together. And a chat bot to make things even more easier and generate different reports as discussed before.

Plan:

- Decide which tables to make which columns to keep(Schemas).
- Start with setting up Database and make data suitable to load in database.
- Decide how to display data to user (make requirements clear).
- Work on how the simple pages will look like(decide the layout).
- Then work on how the reports will be produced.
- Work on workings of chatbot(decide what it cannot and what it can do).

End product can be something like this :
